SUMMARY

I am a senior software engineer in Iloilo. I build production web and mobile systems, and I am comfortable owning APIs, product features, and database work from implementation through testing and release.

EDUCATION

West Visayas State University — BS Computer Science, Cum Laude

WORK EXPERIENCE

Software Engineer (Junior → Senior)

November 2025 – Present

Quirao Group of Companies — La Paz, Iloilo City

- Started as a Junior Software Engineer and was promoted to Senior, taking ownership of backend APIs, mobile/web features, and production reliability.
- Shipped features end-to-end with product and QA — design, implementation, testing, code review, and release.
- Administered application databases, keeping data integrity, security, and availability across platforms.

Projects

- BuildMaster — A construction materials marketplace app. Technical details are under NDA.
- Quirao Group ERP (Frappe / ERPNext): Customized the company ERP on Frappe/ERPNext for operations, finance, and inventory across Quirao Group of Companies. Implemented DocTypes, workflows, reports, and role-based permissions to match internal processes. Supported integration, deployment, data setup, and day-to-day process improvements.

Web Development Intern, Web Dev / Tech Ops Team

January 2025 – April 2025

Quirao Group of Companies — La Paz, Iloilo City

- Built and deployed the Unli-Paluto reservation system for a local dining brand: mobile-first UI, unique reservation IDs, and HTTP(S) uptime monitoring.
- QA-tested web and Android builds of a commercial e-commerce platform (under NDA), documenting bugs and acceptance criteria for the dev team.
- Managed backend product data: bulk CSV uploads, SKU and inventory cleanup, and category standardization.
- Wrote admin, logistics, and POS user manuals, a driver FAQ, and video tutorials; helped onboard and train delivery staff.

Freelance Web Developer

Independent / Contract — Iloilo, Philippines

- Designed, built, and delivered two production systems for clients — from requirements through deployment and handoff.

Projects

- PinPoint — Geofenced Attendance System: Attendance system using geofencing so students can sign in only when they are physically inside the classroom. Blocked remote check-ins and stored timestamped attendance logs.
- CarPass — QR Vehicle Entry System: Freelance: built a QR vehicle-entry system for a student team's thesis. Each car has a unique QR code, and each scan logs the date and time. The public page is a sign-in screen.

Front-End Web Developer

2025

MSL Philippines

- Built and maintained React (JSX/TSX) interfaces on a Laravel backend.
- Worked with backend developers on REST APIs for reliable data flow and performance.
- Used responsive, component-based patterns so the UI stayed maintainable as it grew.
- Helped improve front-end build process and code quality with consistent tooling.

SKILLS

Frontend — React.js (JSX/TSX), Flutter (Dart), HTML5, CSS3, JavaScript, TypeScript, Expo / React Native
Backend — Node.js, Laravel, Python (Flask, Streamlit), REST APIs, Google Cloud Functions, Hono
Database — MySQL, PostgreSQL, Firebase (Realtime DB & Firestore), SQL
ERP — Frappe, ERPNext, Oracle
Cloud & tools — Vercel, GCP, Render, Firebase Hosting, Git, GitHub, Figma, Jira, Selenium, Canva
